# Project Planning Phase

# Milestone & Activity List

1.Planning - 4 Days

We will be planning the models and the features ,Which we are going to implement in the project

2.Requirements - 2 Days

we will be deciding the softwares and the tools that we are going to use in the project and install the required softwares and gather the resources

3.Design - 1 Week

In this phase, we will be designing the modules for the application like Login page, Dashboard, Academic details form and Result page of the prediction

4.Development - 1 Week

We will be developing an model based on machine learning for prediction based on the previous data and academic details of the student.The Algorithm for the prediction is decided based on the accuracy

5.Testing - 4 Week

In this phase, we will be testing both the web design and Machine learning model for and bugs and over or under fitting and debug the error

6.Deployment - 1 Day

At last ,finally after successful testing and clearing of errors we will be deploying the project in the cloud and submitting the project in the github
